MLS® LASER THERAPY GOT PAIN? GET BETTER FASTER.

- MANAGE PAIN
- REDUCE INFLAMMATION
- RESTORE MOBILITY WITH MLS® LASER THERAPY FOR CHRONIC AND ACUTE PAIN

WHAT IS MLS® LASER THERAPY?

The FDA-cleared MLS® Therapy Laser uses concentrated light energy to stimulate the body's own healing process to minimize pain, inflammation and arthritis and reduce recovery times so you can return to a pain-free life. By using specific wavelengths and a patented delivery system, MLS® Laser Therapy can speed up the process of relieving inflammation and pain associated with many conditions, including arthritis. The MLS® Therapy Laser has a unique pain-relieving effect, which can be dramatic. Many patients feel significantly better in just a few treatments.

WILL IT HURT?

That's a great question. Through years of research and development, the MLS® Laser was designed to treat conditions without an excessive thermal effect, often felt as heat. Most people report that they do not feel anything during the treatments. Occasionally, you may feel a slight warming sensation at the treatment site, which is normal and is an indication that the inflammation is being relived and that your body is responding properly.

WILL MLS® LASER THERAPY WORK FOR ME?

For 85-90% of patients with musculoskeletal pain, inflammation or arthritis, the answer is "Yes!" Most patients with pain, inflammation or arthritis report significant pain relief from MLS® Laser Therapy treatments. Whether you have sciatica, arthritis, herniated or degenerative discs, shoulder and neck pain, aching knees, spinal stenosis, or any other musculoskeletal pain, you are likely to benefit from MLS® Laser Therapy. As a matter of fact, many patients who were scheduled for surgery were able to delay or cancel their surgery because MLS® Laser Therapy alleviated their condition and reduced or eliminated their pain.

IS THE EFFECT LONG LASTING?

For most patients the answer is "Yes". While each person and each condition varies, many patients receive tremendous relief from their pain and inflammation when they go through a series of MLS® Laser Therapy treatments. While most patients may not need additional treatments in the future, some conditions, like arthritis, are degenerative. The great thing about MLS® Laser Therapy for arthritic patients is that once you feel better, you can be more active and it is this increased activity that helps minimize the long term effects of arthritis. Even so, you may need an occasional single MLS® treatment every 4 to 6 weeks over the course of the year just to hold the inflammation at bay and keep the arthritic pain in check.
